

STAINLESS STEEL RAILINGS CARE INSTRUCTION

1. It is recommended to clean the stainless steel railings at least once a week with a nonabrasive sponge or cloth.
2. Stainless steel polish or cleaner can be used with a sponge
3. Do not leave acidic items in the railings for long periods of time or this may cause staining due to the acid.
4. Chemical cleaners such as bleach or any product that contain hypochlorite are not recommended with this product. But if used please rinse the surface of the railings immediately to prevent any chance of corrosion.
5. Do not use steel wool, wire brushes or abrasive sponge pads. Use only non-scratch cleaning pads. Using steel wool may cause the surface of the railings to corrode due to the leftover pieces of steel and iron corroding on the surface from the wool.
6. Stainless steel products will scratch from everyday use but because of its inherent toughness these scratches do not cause wear. The scratches on your railings will eventually start to blend together forming a natural finish.
7. Glass elements just wash with warm soap water and then finish with window cleaner.
8. The glass surface should then be wiped dry with a clean grit-free cloth or paper.
9. Never use abrasive pads or abrasive polishing material on the glass surface.
